SUMMARY: SFOD-A sought to develop a template clinic for a small team to use for future training and operational environments. The Detachment ran 3 x exercises to test the functionality of their clinic setup. After the first test, the 18D, 18Z, a prior 18D and Delta Course instructor, and 18A redesigned the setup with accessibility and ease of transport in mind. The following slides hope to serve as a conversation starter for small units to share best practices regarding TTPs, SOPs and prolonged-field care clinic environments.

GOAL: Create a template PFC/SFODA Internal Clinic Setup Example Template. In the same light of GTA 31-03-003, create a doctrinal baseline to aide 18Ds in planning and execution.

DETACHMENT MISSION PLANNING GUIDE

July 2012

Figure 4-1. Isolation area configuration example

Model exists for planning/briefing setup but not for medical clinic setup.
Where is the 18D Equivalent?

Plethora of resources provided by doctrine/USASOC/outside orgs for tasks/charts/training, no clinic model currently available. Hospital trauma bay design assumptions do not meet SOF team specific considerations.

Supervise UW Aid Station Operations

081-833-4663

Conditions: An aid station has been established in the unconventional warfare (UW) operational area and is prepared to receive patients.

Standards: Perform inspections to ensure that each section is prepared with the proper materials to conduct patient care.

Performance Steps
NOTE: The organization and management of a UW aid station is extremely variable. This task reflects steps that should be covered if personnel and equipment are available. In a more developed UW environment, some of these elements would be moved to the guerrilla hospital.

1. Ensure the records section is prepared to receive patients.
   a. Personnel medical records are kept on field files.
   b. Maintain two field desks for sick slips, medical forms, medical logs, laboratory slips, and X ray slips.

- Head
- Patient Table
- Chest Tube
- Gloves
- Sterilization tools
- NG/OG Tube
- Airway MGMT
- O2
- Suction(s)
- Warming Devices
The key takeaway for the hanging items is ease of access to commonly required material in immediate treatment situations. Critical items are always within reach, but not in the way.

HANGING ITEMS:
- TQs
- IV SET: SEE RIGHT
- PRESSURE SLEEVES
- PERMANENT OVERHEAD LIGHTING
- HEADLAMPS FOR TREATMENT TEAM
- SCISSORS
- TAPE
- WRITING INSTRUMENTS
- BLOOD DONATION RECIPIENT KIT
- ADDITIONAL CARABINERS FOR HANGING/SECURING

HANGING/IV SET:
- GLOVES
- FLUID
- TUBING
- NEEDLES
- TEGODERM STARTER KIT
